Abstract (en)
[origin: EP2208851A2] The element (1) has a holding element (4) for a locking element (7) at a cord (2), and a fastening element (5) at a ladder cord (3). The fastening element is firmly connected with the holding element, where the holding element is formed as a screw-shaped spring element wound around a middle axis. Distances of adjacent windings approximately correspond to a diameter of the former cord. An inner radius of the holding element is sectionally smaller than light width of the locking element. The fastening element comprises a wire element formed around a middle point.
