Abstract (en)  
[origin: EP2208956A2] The method involves arranging conduit elements (3) e.g. flexible tubes, between perforated plates (2). Cable element sections (4) are partially inserted into respective passage openings (8) of the plates. The conduit elements are glued with the plates by an adhesive layer (7). The conduit elements and/or the plates are made of plastic or metal. Flow-accelerated openings (13) are provided at the adhesive layer. The cable element sections and/or the passage openings include a retaining contour, which prevents slippage of the plates and the conduit elements during the gluing process. An independent claim is also included for a heat exchanger comprising conduit elements.
