Abstract (en)
[origin: WO2008024521A2] The present invention is an armpocket attached by "V" configured straps allowing a wearer's upper arm to comfortably and securely support the pocket. A storage body with an externally accessible touch-through window may contain dual flaps extending over the top of the armpocket when opened, and extending below the armpocket when unlatched. Various pocket/strap sizes along with many material compositions suitable for every occasion with added security provided by the compressible split-end strap that fold back over the double-loop sizing device. Utilizing visco-elastic memory foam-type padding sculpted to mirror the arm's natural contours, the armpocket wearer can also comfortably and securely carry heavy items. In conjunction with closed-foam (positive buoyancy) padding, micro-fiber wicking material, and water-resistant exterior shell, the armpocket can be worn in any environment including water sports.
