Abstract (en)
[origin: WO2009056523A2] The invention relates to a concept for the decoration of a support, in particular of interior surfaces of a building, in which concept a dry composition, intended to be mixed with water, is used to more easily prepare a paste that can be applied to the support, with a view to producing a decorative coating having a "concrete feel", a "concrete appearance", a "concrete hardness", and which can moreover be removed using a wallpaper steam stripper. To achieve this objective, the invention firstly relates to a dry pulverulent composition comprising, in weight percent on a dry basis: from 30 to 60 of cement, from 30 to 60 of filler, from 0.5 to 10 of at least one absorbent, from 0.01 to 1 of at least one fibrous flexibilizing agent, from 0.01 to 3 of at least one retarder, from 0.01 to 1 of wetting agent, from 0.1 to 20 of decorative particles, from 0.5 to 10 of at least one hardener, and from 0 to 1 of at least one colorant. The invention also relates to a method of preparing a paste by mixing this composition with water, and also to a method of obtaining a concrete decorative coating. The invention also relates to the tools used for this method, namely, in particular, a notched float for the application of the paste, a fan rake for creating a scratched effect, a nylon bristle brush for creating a brushed or combed effect, a two-blade structuring spatula for creating a striped or striated effect. The invention finally relates to a decorative coating kit for interior surfaces of a building comprising the aforementioned composition, at least one of the aforementioned tools, (optionally) a smoothing spatula and at least one of the following components or accessories, primer for basecoats, sponge for blending effect, specific colorant, product for white or coloured haze, protective varnish or wax.
