Abstract (en)

[origin: US2009094928A1] In a building component or shuttering body (2) for the production of a wall structure including to oppositely located and substantially parallel, plate-shaped elements (6, 7) connected by at least two spacers (1), wherein the free space between the plate-shaped elements (6, 7) is fillable with an, in particular, settable mass, e.g. concrete, it is provided that it comprises at least two spacers (1) of polystyrene, in particular expandable polystyrene of elevated density, as well as plate-shaped elements (6, 7) of polystyrene, in particular expandable polystyrene, so as to enable the production of a building component (2) in a simple and cost-effective manner.
