Abstract (en)  
[origin: WO2009065727A1] The invention relates to coupled optics for measuring using fiber optic sensors on rotating part, wherein two coupled goniometer devices are used in order to achieve alignment of a measuring light beam to an optical fiber in a rotating part in a simplified manner. The goniometer devices are coupled such that the light beam impinges unchanged on the receiving collimator when displaced by means of one or both goniometer devices.
