Abstract (en)
[origin: EP2210709A2] The leg (100) has a locking device provided with a fixing device (200) that is operated such that the leg is fixed relocatably in a non-fixed condition in an axial direction and in a fixed condition at an arbitrary position of another locking device. The latter locking device is arranged at a housing of a power screwdriver, and the former locking device is designed as internal teeth that engage with external teeth arranged at the housing. A fixing element is designed as a ball (205) that is made of steel or nonferrous-metal plastic. The leg is provided with a tooth that is made of plastic, rubber, steel, aluminum, titanium or an alloy of steel, aluminum and titanium.
