Abstract (en)

[origin: EP2210974A2] The arrangement has a catch element (4) for locking at an inner side (7) of a door (3). The catch element cooperates with an overload safety device and with a lock element that is arranged at an opening edge of the feed opening. The catch element comprises a locking mechanism (11) with a teat-off coupling that operates against a force of a spring. The coupling directly cooperates with a grip lever that operates at an outer side of the door. The coupling prevents release with the lever in an electrically operated lock (14) and causes a decoupling of the lever from the locking mechanism.
