Abstract (en)

[origin: EP2210993A1] The panel has ribs (2A, 2A', 2B, 2B') equipped on a rib-carrying face (10), where the panel is in form of a rectangular plate (6). The ribs extend parallel to a side of the panel by forming a rectangular shaped continuous or discontinuous frame. A section of one of the ribs is inserted into a groove of the frame. Flanks (21, 22) opposite to the ribs are inclined with respect to each other in a direction of height of the ribs. The ribs and the plate are realized in a single piece made of a material such as wood fiber and binder. An independent claim is also included for a building comprising a framework formed of posts and cross beams with a parallel groove to receive a section of the ribs of the panel.
