Abstract (en)
[origin: EP2211005A1] The transmitter (10) has a housing (20) formed from housing parts (20a, 20b) and enclosing an electronic unit. A safety element (21) irreversibly connects the housing parts with each other. The housing parts are provided with openings. The safety element is arranged within the openings in an irreversible manner and designed as a cylindrical safety pin. A housing integrity is represented by conditions of a control region (24). The control region is formed at a free end at a housing upper surface (23) in an area of one of the openings. The housing parts are made of plastic.
