Abstract (en)

[origin: WO2009065903A2] The invention relates to a method for producing an organic composition containing a functional component selected from among the group comprising a thermoplastic polymer, an enzyme, an initiator, a paraffin, an oil, a dye, and a hair or skin care substance. Said method encompasses the following steps: i) ia) an n-nonyl ester obtained by reacting an n-nonyl alcohol component with another component that can react with the n-nonyl alcohol component in order to form an n-nonyl ester is supplied as an additive, ib) the functional component is supplied, and optionally ic) at least one other additive is supplied; and ii) the n-nonyl ester, the functional component, and the at least one other optional additive are mixed. The invention further relates to a method producing a molded article, a method for producing a packaging material, the use of at least one n-nonyl ester, the use of a molded article, a method for cleaning the surfaces of boreholes, boring devices, or borings, methods for producing a borehole, and methods for producing an oil or a gas.
