Abstract (en)

[origin: US2010239780A1] The invention relates to a method for dyeing and/or printing adhesive closure parts (10) having a plurality of hooking means (12) predominately made of a plastic material connected to a carrier (14), wherein a dye medium is applied to the surface (16) of the adhesive closure part (10) or the parts thereof by means of an application unit (18). Because a dye is used that is based on a solvent-free wax, which is applied by means of the application unit (18) in a melted form in droplets, bubbles, or in pellet form, and that enters into a fixed connection to the surface (16) in the cooled, cured state, a wax dye application may be achieved that is markedly colorfast and UV-resistant.
