Abstract (en)

[origin: WO2009049854A2] A cooling arrangement for a utility vehicle (310) is provided. A portion of the cool external ambient air, drawn into a radiator compartment (120) via an air intake unit (190), is supplied via a connecting duct (160) into an engine compartment (110) wherein the connecting duct bypasses a heat exchange unit (190). Advantageously, temperature sensitive components can be cooled by cool air which is not heated by the heat exchange unit (190).
