Abstract (en)
[origin: WO2009065482A1] A universal instrument or test set (1) is proposed which can accommodate various measurement barrels (2), firing chambers (7) and firing systems (8) and can carry out various measurement tasks. This instrument and test set (1) is based on the essential idea that all the major components of the instrument and test set (1) can be mounted replaceably in the appliance (1). Any desired weapon type can be reconfigured by the variability of the housing design of this appliance.
