Abstract (en)
The closure for containers comprises a capsule (2) that houses a product to be mixed with the contents of the container (1), and it comprises a security ring (4) that can be broken that prevents the opening of said capsule accidentally. Said security ring (4) comprises a handle (4a) and a weakening groove, so that when the handle (4a) is driven, the security ring (4a) breaks. It is provided a container with its corresponding closure, wherein the mixture of the product of the capsule and the contents of the container is carried out only when the user wants, simply removing the ring and breaking the capsule afterwards.
