Abstract (en)
[origin: EP2213613A2] The device has a storage container (8) for receiving beverage, and a filling valve for filling packages e.g. bottles, with the beverage from the storage container. A heat exchanger (9) is integrated into a gap (8c) between an internal wall (8a) and an external wall (8b) of the storage container. Another heat exchanger is integrated into a wall of the filling valve, and heat exchanging medium flows between the internal wall and the external wall of the storage container. The storage container is connected with a cooling and/or heating assembly (10).
