Abstract (en)  
[origin: DE102009007185B3] The construction has profile sections (8, 9) with surfaces, which are turned together in an installation position. The surfaces are gripped together by a rod projection (15) running in a longitudinal direction of rear-sectioned grooves (5, 6) of a stay profile (1) and another groove (14) accommodating the rod projection in a form-fit manner. End regions (10, 11), which are engaged in the rear-sectioned grooves, of the profile sections are angularly formed such that the profile sections are positioned by pivoting movement in the rear-sectioned grooves.
