Abstract (en)

[origin: EP2213966A2] The temperature conditioning device (132) is inserted in a wall (114,116,118,120) of a container body (102) of a food transport container (100). A fluid connection is provided between an interior of the temperature conditioning device and a container interior (124) of the container body in an assembled condition of the temperature conditioning device. A fluid enters the container interior through the fluid connection. An independent claim is also included for a food transport container combination with a container body, a temperature conditioning device and an air duct.
