Abstract (en)
[origin: EP2213974A1] A shield structure of personal protection, in particular of the type used by the forces about in asdividing wall antisommossa, comprises a protection portion (10) having a first surface (11) that, in use, faces a user (50) who wears the shield and a second surface (12) opposite to the first surface (11). The shield structure (1) comprises, furthermore, a support portion (20) at which the user (50) grasps the shield. The protection portion (10) and the support portion (20) are pivotally connected by means of a connection device (30) arranged between thereof. More in detail, the support portion (20) has a central hole (34) having an circular edge (44) and the connection device (30) protrudes from a central zone of the first surface (11) of the protection portion (10). In particular, the connection device (30) comprises guide means (35,36) that contains the circular edge (44) racchiudendol slidingly in a way adapted to cause the support portion (20) of rotating with respect to the protection portion (10).
