Abstract (en)

[origin: EP2175329A1] The movement (1) has a barrel (46) coupled to an activating device and a vibrating element (2) by a kinematic chain (4) for forming a vibrating alarm mechanism that is triggered at a predetermined time, where the vibrating element is an oscillating mass. Another barrel (36) is coupled to the oscillating mass by another kinematic chain (3) for automatic reassembly of the movement. The former barrel is locked in rotation by a ratchet (48) in outside of alarm time, and free in rotation while triggering an alarm. An independent claim is also included for a clockwork device comprising a support.
