Abstract (en)

[origin: EP2214066A1] The device (1) has a correction position selecting mechanism including a selector arm (21) that is pivotably mounted and cooperates with a corrector mobile (10) for driving the corrector mobile from one correction position (A) to another correction position. An angular positioning unit e.g. column-wheel (26), positions the arm. A control unit i.e. push-button (27), controls the angular positioning unit and is arranged independent of a winding stem (2). The mechanism has a position indicator hand that is rotatably integrated with an indicator arm of the mechanism.
