Abstract (en)
[origin: WO2009059764A1] The present invention relates to a pacifier which has a suction element (1) and a sucker plate (2), and a flexible connection (3) between suction element (1) and sucker plate (2). In order to prevent anomalies from arising through the use of the pacifier, it is proposed according to the invention that the connection (3) between suction element (1) and sucker plate (2) can be deformed in a manner substantially free from force. The forces exerted on the rows of teeth are effectively minimized by such a flexurally slack connection (3).
