Abstract (en)

[origin: WO2009071494A1] The invention particularly relates to a slider (1) for actuating closure profiles (P1, P2), in particular for a closing assembly on a bag (S), that includes a base (10), two flanges (11, 12), and means adapted for respectively urging said closure profiles (P1, P2) towards each other or away from each other, depending on the slider movement direction along the profiles (P1, P2), in order to move the profiles (P1, P2) between a closed latched position and an open separated position, as well as protruding urging spigots (4) on said flanges (11, 12) in the vicinity of the end thereof opposite said base (10) in order to temporarily open the same and facilitate the engagement thereof onto said profiles (P1, P2) when a force is applied on said spigots (4). The slider is characterised in that said means includes means for receiving protrusions (T1, T2) associated with said profiles.
