Abstract (en)
[origin: EP2055645A1] The closure (1) has a hollow-cylindrical casing (3) extending from a circular head part in a direction along an axis of rotation, where the closure is made of plastic. The casing has an inside (3b) with an inner thread (8), and a pivot part (4) provided on an end section of the casing opposite to the head part. The pivot part is connected with the casing via a weak point (4b), where the pivot part has a cam (4a) that protrudes toward the axis of rotation. The cam is arranged at a distance from the weak point. An independent claim is also included for a container comprising a discharge opening.
