Abstract (en)

[origin: WO2009065906A2] The invention relates to a method for producing an organic composition containing a functional constituent selected from the group consisting of a thermoplastic polymer, an enzyme, a hardener, a paraffin, an oil, a dyeing agent, and a hair or skin care substance. Said method contains the following steps: i) the preparation of ia) an n-nonyl ether as an additive that can be obtained by reacting an n-nonyl alcohol constituent with another constituent able to react with the n-nonyl alcohol constituent in order to form an n-nonyl ether, ib) the functional constituent, and optionally ic) at least one other additive; and ii) the mixture of the n-nonyl ether, the functional constituent and optionally the at least one other additive. The invention also relates to a method for producing a moulded body, a method for producing a packing item, the use of at least one n-nonyl ether, the use of a moulded body, a method for cleaning the surfaces of boreholes, boring devices or borings, methods for producing a borehole, and methods for producing an oil or a gas.
