Abstract (en)

[origin: WO2009071179A9] The present invention relates to a support bracket (10), particularly for suspended sanitary systems, comprising: - a main body (11) having a structure comprising two substantially L-shaped sections (12, 13) connected to one another, - first fixing means suitable for fixing the main body (11) to a first section (12) on a support wall (14), - second fixing means suitable for fixing the sanitary system (15) to the second section (13) on the main body (11). The second fixing means comprise - a runner (17) suitable for sliding along a guide (16) defined along a first side of the second section (13) and inclined in the direction of the connecting region of the two sections (12, 13), wherein the second side of the second section (13) is suitable for coming into contact with the sanitary system (15), - an element for fastening the sanitary system (15) to the second section (13), said element being suitable for connecting the sanitary system (15) to the runner (17), said element extending through a first hole (18) defined in the second section (13). The runner (17) and the main body (11) are present as one body and are connected by elastic connectors (19).
