Abstract (en)

[origin: TW200924282A] A first conductor structure (1) is provided in an antenna arrangement, particularly for a motor vehicle windshield antenna, said conductor structure being formed by the heat field of a window pane (2), and a second conductor structure (3) configured as an antenna conductor structure and galvanically separated from the heat field. At least one conductor (41) of the heat field extends in a looped fashion between the actual heat field and an outer edge of the pane (5). The second conductor structure (3) projects into loops (7) formed by said at least one conductor (41) of the heating field in a comb-like manner.
