Abstract (en)
There is provided a partition plate for use in a V-shaped measure of a medicine packing device, which allows a medicine remaining in the V-shaped measure to be easily cleaned and is smoothly reciprocated in the V-shaped measure. The partition plate 7 comprises: a slide member 8 including a guide receiving portion 11 and being attached so as to be reciprocated along a side plate 4; and a partition member 9 including a guide portion 18 removably guided by the guide receiving portion 11 of the slide member 8, the partition member being reciprocated in the V-shaped measure 1 while being maintained parallel to end plates 5. A grasping portion 8a for grasping the partition plate 7 is integrally provided in the slide member 8. Grasping the grasping portion 8a and moving the partition plate 7 prevent the partition plate 7 from flexing and smoothly moves the partition plate 7 in the V-shaped measure.
