Abstract (en)

[origin: EP2216090A1] The device has a tube section (4) arranged in another tube section (3), and a supply tube (5) for supplying fluid (2) into the former tube section. The former section includes a throttle opening (6) for supplying the fluid from the former section in a fluid flow (1) into the latter section. The former section has a flow pressure opening aligned against the fluid flow. A cross-section of the throttle opening is aligned parallel to a cross-section of the flow pressure opening. The connection is arranged with respect to the fluid flow between the throttle and flow pressure openings. An independent claim is also included for a method for dosing fluid in a fluid flow.
