Abstract (en)

[origin: EP2216476A2] The formwork (2) has a one-piece foamed insulating body (3) including a downwardly open receiving chamber (7) for supporting a roller shutter housing. A stop element (10) is provided for a window or door frame (1a) mounted in a building opening. The stop element is formed as a heat insulating element and is detachably connected with the insulating body. A metal profile (8) is arranged inside the receiving chamber. The insulating body completely surrounds the metal profile. Cross-section of the metal profile corresponds to cross-section of the receiving chamber.
