Abstract (en)

[origin: EP2216553A2] The arrangement has a ventilator support (20) comprising a soft component (21), where a ventilator (10) sectionally lies at the component. The ventilator support comprises a hard component (22), which comprises larger hardness and/or reduced elasticity and/or reduced deformability in comparison to the soft component. The hard component lies at a fixing unit at a mounted state of the ventilator and/or stays in contact with the fixing unit during mounting of the ventilator support. The hard component sectionally or completely surrounds the soft component.
