Abstract (en)
[origin: EP2216616A2] The device has a safety actuator (11) for remote controllably shooting, and a cartridge (4) that is fed to a weapon breech (5) through a feeder that is laid in a breech path. Shooting activation takes place by a weapon trigger (12). The feeder is connected with the actuator over a transmission rod (10) such that the feeder is moved from a feeding plane of the breech during failure of actuator. The supply of cartridge is separated from the weapon breech such that the weapon breech slides forward to the cartridge that is moved from a feeding path.
