Abstract (en)

[origin: WO2009068196A2] The invention relates to a device for treating at least two filter strands (8a, 8b), comprising at least two filter guide paths of the tobacco industry, along which a filter strand (8a; 8b) is guided, and a supply device (40) for supplying at least one granulate or powdery additive to the filter guide paths for introducing into the filter strands (8a; 8b). The invention is characterised in that the supply device (40) comprises at least two supply sections (40a, 40b) to which at least one supply section (e.g. 40a) of a filter guide path (z.B. 8a) is associated, and a dosing device (50) that is used to dose the amount of additive (70) that is to be supplied via the supply device (40) and for distributing to the associated filter guide path.
