Abstract (en)

[origin: WO2009068535A1] The invention relates to a method for conditioning a suspension containing magnetizable particles, wherein suspension containing the magnetizable particles is guided through a gap (3) in order to bring about shear strain in the suspension containing the magnetizable particles. A magnetic field is applied in the gap (3) such that suspension containing the magnetizable particles is sheared in the presence of the magnetic. The invention further relates to a device for conditioning suspensions containing magnetizable particles, comprising at least one gap (3) through which the suspension containing magnetizable particles flows, in order to apply a shear force to the suspension containing magnetizable particles. The device further comprises at least one magnet for generating a magnetic field in the at least one gap (3).
