Abstract (en)
[origin: WO2009071054A1] The invention relates to a printing system, comprising a print material inlet, where non-imprinted print materials can be supplied to the printing system, and a printed product outlet, where printed products can be delivered out of the printing system, and comprising at least one printing couple (19, 251) or printing tower in which the print material can be imprinted, and comprising at least one reel changer (18) or sheet feeder for feeding the print material, and comprising at least one unit, particularly a folding unit (22, 255, 256) or sheet delivery for post-processing and/or removing the printed product, wherein the printing system comprises at least two system levels disposed vertically on top of each other, and wherein the printing system forms at least one material flow line (12), along which the print material is delivered through the printing system, wherein in addition to the printing system a transport system is provided, which extends parallel to the material flow line across the entire length of the printing system, wherein the transport system comprises at least one delivery device (33, 35, 39) and at least one transport unit (26, 29, 30, 31, 32, 34, 36, 141, 142, 151, 161, 191, 202, 221), and wherein the delivery unit (33, 35, 39) can be displaced horizontally parallel to the material flow line (12), and wherein the transport unit (26, 29, 30, 31, 32, 34, 36, 141, 142, 151, 161, 191, 202, 221) can be raised vertically to any of the system levels by driving the delivery device (33, 35, 39).
