Abstract (en)
[origin: WO2009068008A1] The invention relates to a transport arrangement comprising a transport pallet (1) that has a horizontally configured support frame (6) with longitudinal bars (7, 7a) and transversal bars (8, 8a) and a pallet base (5) for transporting retaining feet (3, 4) for fencing or barrier elements (2). The transport pallet (1) has retaining arrangements (11) for receiving and fixing the tube ends (15) of the fencing or barrier elements (2). The tube ends protrude below (15) a lower edge (16) that runs between the upright tubes (14) of a fencing or barrier element (2). The tube ends (15) of a fencing or barrier element (2) that is located on the side of the transport pallet (1) can be pushed into pockets located at the sides of the longitudinal bars, so that the retaining feet (3, 4) stacked on the transport pallet (1) are prevented from slipping downwards.
