Abstract (en)  
[origin: WO2009068166A1] The invention relates to a machine for closing bottles or similar containers with closures, comprising closing stations with a container carrier and a closing tool and formed at the circumference of a rotor that can be driven to rotate about a vertical machine axis (MA). According to the invention, a separate, controlled drive motor is provided at each closing station for executing the vertical movement required for the closing process.
