Abstract (en)
[origin: WO2009069157A1] A tap (4) comprising a tap body (8) provided with a seating space (12) inside the body (8), a water intercepting element (16), a tap pipe (28) having a dispensing outlet (32) and a coupling end (36) suitable for being connected to said tap body (8). The tap pipe (28) is mechanically separate from the tap body (8) and is removably associable to the tap body (8); moreover, the tap pipe (28) comprises a coupling end (36) having a fitting portion (48) at least partly insertable in a seat (52) of the tap body (8) so as to be in fluid connection with the water intercepting element (16). Advantageously, the tap (4) comprises removable coupling means (40), arranged inside the tap body (8), and suitable for interfacing with the fitting portion (48) inside the tap body (8) so as to lock the pipe (28) on the tap body (8).
