Abstract (en)

[origin: WO2009074287A1] Disclosed is a geothermal probe (1) comprising at least two polymer tubes (2.1, 2.2) that run parallel in at least some sections and a monolithic or multipart molded piece (3) which is made of similar material and is located at an end of at least one tube. According to the invention, said geothermal probe (1) is characterized in that at least the tube that is in contact with the ground is welded and cross-linked to the molded piece.
