Abstract (en)

[origin: WO2009053402A1] Method for intercepting communications exchanged between a first terminal and a second terminal, characterized in that it comprises a step of synchronizing the communication exchanges over the traffic channel, comprising a step where the instants of sending of bursts responsible for the allocation of the resources for the communication are determined and a step of calling the demodulator in the intervals of samples liable to contain these bursts so as to obtain the characteristics of intercepted communication or the communication on which the synchronization has been performed.
