Abstract (en)

[origin: EP2218548A2] The connection (11) has a ball joint head (19) arranged at a linear movable actuating element (17). The ball joint head is connected with a rotary element (20) for partial transfer of a linear movement of the actuating element to the rotary element. The rotary element is rotatably mounted at a rotary axis (21). The ball joint head is guided into a groove (24) of the rotary element in a movable manner. The ball joint head is partially enclosed by the groove for secure holding of the ball joint head in a direction of the linear movement.
