Abstract (en)

A press (1) for heat transfer comprising a lower plate (7) and an upper plate (9) horizontally disposed, allows to house even a small sized motor above the arm (2) supporting the upper plate, with the possibility of multiplying the force exerted from the motor through the leverage, wherein the motor (12) is rotatably articulated to an arm (2) distal portion and provided with an operating stem (13) reciprocating in a direction substantially concordant to the arm (2) one, operating on a leverage (10, 18) connected to a proximal portion of said arm (2) for exerting a predetermined pressure on said upper plate (9).
