Abstract (en)

[origin: EP2218575A1] The machine has an electrical lifting unit (3) including a lifting device (5) for causing lifting movement with a large hoist, and another lifting device (7) for causing lifting movement with a creep hoist. A molding station (22), a cutting station, and a sealing station are provided with a fixed mold half (1) and a movable mold half (2), which is moved to the fixed mold half by the electrical lifting unit. The latter lifting device generates force that presses the movable mold half against the fixed mold half.
