Abstract (en)

[origin: EP2218622A1] The face (20) has a main wall (4) integrated between a roof (32) and a chassis (28) in a body (24) of a rail transit car. An access opening (19) is formed inside the rail transit car and extended through the main wall. An access door (14) is moved with respect to the main wall. The main wall has a door mounting opening (18) whose dimension is 100 mm larger than dimension of the door for permitting mounting of the door at different heights. An auxiliary wall element (10) is fixed on the main wall, and defines the access opening inside the door mounting opening. Independent claims are also included for the following: (1) an assembly for fabricating a side face comprising a main wall (2) a method for fabricating a series of side faces.
