Abstract (en)  
[origin: EP2218649A1] The assembly has male and female elements carried by primary webs (160, 260), where the primary webs and secondary webs (170, 270) co-extruded with the elements. The secondary webs are respectively connected to walls of a sachet and respectively connected to the primary webs at articulation zones (172, 272). The articulation zones are formed by extrusion and located perpendicular to connection zones (102, 202) of the elements on the primary webs. Complementary additional elements (100b, 100c, 200b, 200c) e.g. hooks, are carried by the primary webs at sides of the articulation zones.
