Abstract (en)
[origin: EP2218822A2] The stone (1) has vertically running moldings (10, 14, 17) laterally projecting from a vertical side wall (16), where the stone is made of concrete. The moldings have a lower section (11) runs parallel to the side wall, and an upper tectiform sections (12, 15) extend to the side wall. The upper tectiform sections run bently into a vertical section in the side wall such that a tangent that is set at a bend forms an angle less than or equal to 45 degrees by the side wall. The moldings are formed as oblong composite elements, bulges (13) or flat distance sections. An independent claim is also included for a mold for manufacturing a paving stone.
