Abstract (en)

[origin: EP2218897A1] The device has an exhaust gas pipe (3) conducting exhaust gas. A channel (1) conducts air to a combustion engine, where the gas pipe extends into the channel. The gas pipe is in thermal exchange with a coolant from a coolant circuit in an area of insertion in the channel. The gas pipe is connectable to an assembly member (2), where the coolant passes through a coolant channel (6) that is provided at the assembly member. The gas pipe includes a flange (4) that is connectable to the assembly member, where a seal (5) is arranged between the flange and the assembly member. The assembly member is formed of metal.
