Abstract (en)
[origin: EP2218987A2] The cooling device has a storage area (5) cooled by air flowing along an evaporator (4). A flow path of the air runs downstream from the evaporator through a compartment (42) partitioned from the storage area, where the compartment is arranged adjacent to a lower edge of the evaporator. The compartment is designed for receiving a beverage bottle (20). A ventilator is provided for allowing the flow of air through the compartment. The ventilator is connected to a wall component. The blower is switched-on and switched-off by a switch.
