Abstract (en)
[origin: EP2219008A2] The system (wws) has a launching device connected with a vehicle (F1) via a holding device (1.1). The launching device is arranged at an outer end of an erector arm (1) that is pivoted around a horizontal pivot axis for weapon cartridges by a firing pin. The erector arm is connected with the vehicle on the holding device. The erector arm is pivoted from an idle position to an upright firing position, where the idle position is lowered along a direction of the vehicle. A clip i.e. flat and plate shaped component, is made of plastic material.
