Abstract (en)

[origin: EP2219162A1] The system has a mobile electronic device e.g. cell phone, with a transmitting unit for transmitting offer/request profiles of end users to a data server over a wireless data network. A navigation equipment transmits position data of the device to the server. The server receives and stores the transmitted position data of the device and position data of the end users. A storage unit stores the offer/request profiles, and a determination unit determines correlation between the offer/request profiles and correlation between the position data that are assigned to the end users. An independent claim is also included for a method for locating desired objects.
